

# Assistive Technology Journey

Do all learners have access to the assistive technology they need in order to participate and progress in the curriculum? Does every adult understand the assistive technology consideration and implementation process, ensuring that learners get what they need?

Assistive technology (AT), defined as anything that supports individuals in doing things they would not otherwise be able to do, can provide the traction learners need to succeed but can feel intimidating to educators. This course is for anyone who supports students that may benefit from access to AT. The AT Journey will empower participants to consider, select, and implement AT, using a team based approach composed of individuals with different perspectives, expertise, and insights.

**If you're ready to support the learners  
in your classroom/ caseload:**

**If you're ready to create systemic  
change for ALL learners in your ISD:**

**Explore AT Journey**

Alt+Shift partners with intermediate school district (ISD) teams to engage in systemic work that strengthens capacity to implement and sustain AT Journey within their member districts and ISD programs, yielding improved educational outcomes for all learners.

## Testimonial

*"The training has significantly impacted students as our staff has significantly improved in their knowledge and expertise in effective consideration of assistive technology. As their knowledge has grown, students are receiving access to AT earlier and earlier which has helped students in their level of independence, efficiency and access within the school and home settings." - AT Consultant; on AT Journey Partnership with Alt+Shift*
