

Building Blocks to Autonomous Communication

Do you have learners who would benefit from consistent access to communication tools, along with knowledgeable others who understand how to support their needs?

Building Blocks to Autonomous Communication (BBtAC) focuses on the why, what, and how of supporting learners with communication needs. This course is for anyone who interacts with learners that may benefit from access to communication tools. The overarching goal is that all learners leave their educational programming as autonomous communicators - in other words, that they can say what they want to say, when they want to say it, how they want to say it, and with whom they wish to communicate.

If you're ready to support the learners in your classroom/ caseload:

If you're ready to create systemic change for ALL learners in your ISD:

Alt+Shift partners with intermediate school district (ISD) teams to engage in systemic work that strengthens capacity to implement and sustain BBtAC within their member districts and ISD programs, yielding improved educational outcomes for all learners.

Testimonials

"I really enjoyed the pace. We were able to obtain the information, put it into practice in the classroom and then come back. It allowed for a lot of additional support." - SCI Teacher after engaging in an Alt+Shift Partnership focused on BBtAC

"What a great course! I learned so much! That's the first PD in a long time that actually made me excited." - Speech-Language Pathologist after engaging in the Online Modules
